

Physical activity creates a warm, moist, nutrient rich environment stimulating the growth of odor causing microbes on your skin. The microbes are transferred to the garment during this activity.

On untreated textiles, microbes can multiply exponentially in a few hours. They feed on organic particles such as sweat which generate unpleasant odors.

TEXTILES **WITHOUT**  
**AGIENE™** TECHNOLOGY

## MICRO SILVER CRYSTAL TECHNOLOGY CRYSTALS LOCK ONTO FIBRES

As a precious metal, silver has been used by humans for over 4000 years. Agiene™ combines nature's power of silver with modern science and technology in an effective system for long lasting freshness.

Textiles treated with Agiene™ contain millions of micro silver crystals locked onto the fiber to fight odor causing microbes. Heat and moisture activate Agiene™ micro crystals to prevent the growth of microbes and reduces the production of unpleasant odor. Freshness lasts longer.
